SERVICES

Three ways we work

Most businesses do not need an AI strategy. They need one process that stops leaking time and money. We start there, prove it works, and expand only when it earns the right to.

01 AI Development

Custom systems built from your requirement rather than assembled from a template. Where an off-the-shelf product does not fit the way you actually work, this is the alternative - scoped, built, tested and handed over with documentation.

- Custom models
- RAG systems
- Chatbots & assistants
- Web applications
- APIs

02 AI Automation

The repetitive work that quietly consumes your team - answering the same enquiries, sorting leads, moving data between tools, generating routine documents. Set up once, it runs whether or not anyone is at a desk.

- Enquiry handling
- Lead qualification
- Document generation
- Data workflows
- Scheduled reporting

03 AI Integration & Services

Bringing AI into the systems you already run, instead of replacing them. Your existing website, CRM, WhatsApp, spreadsheets and internal tools stay where they are — they simply start doing more.

- WhatsApp & web
- CRM connections
- Existing product features
- Internal tools
- Ongoing support

WHERE IT PAYS OFF

What this looks like in practice

Six situations where the return is quick and easy to measure. Most engagements start with exactly one of them.

01 ENQUIRIES

Nobody waits for a reply

Customers who message at midnight get an answer in seconds instead of the next morning. Most businesses lose enquiries to slow replies, not to competitors.

02 DOCUMENTS

Files that answer questions

Your manuals, policies, catalogues and past quotations become searchable in plain language - with the source shown, so answers can be checked.

03 SALES

Leads sorted before you see them

Incoming enquiries qualified, tagged and prioritised automatically, so your team spends its hours on the ones that are actually ready to buy.

04 OPERATIONS

Routine paperwork, generated

Quotations, invoices, summaries and reports produced from data you already hold, in your own format, without anyone retyping it.

05 TEAM

An assistant that knows your business

An internal tool trained on your own processes, so new staff stop interrupting senior staff to ask questions that were answered last month.

06 PRODUCT

AI inside what you already sell

Search, recommendations, summarisation or chat added to your existing product - a feature your customers notice, not a rebuild they endure

BUILT WITH

- **Machine Learning**
- **NLP**
- **RAG**
- **Django & Web**

HOW WE WORKS

Five steps, no surprises.

01 Discovery call

Thirty minutes on what the process looks like today, where it breaks, and what it costs you when it does. No preparation needed from your side.

02 Scope and proposal

A written scope: what gets built, what it connects to, how long it takes, and what it costs. Fixed before any work begins.

03 Build in milestones

Delivered in stages you can see and comment on, so direction changes stay cheap and nothing lands as a surprise at the end..

04 Integrate and hand over

Connected to your existing tools, tested with real data, and handed over with documentation and a walkthrough for whoever will run it.

05 Support and iterate

Ongoing support once it is live. Real usage always reveals things a specification cannot, and those get fixed.

Start with the problem.

Tell us which process is costing you the most time right now. We will tell you honestly whether it is worth automating - and reply within 24 hours.
