FOR STUDENTS

# Real-world AI projects, built with you.

Final-year and mini projects that come with full source code, proper documentation, and one-on-one mentorship - built to survive a viva and hold up in a placement interview.

**50+** AI PROJECTS

**10+** FREE TOOLS

**500+** STUDENTS HELPED

WHAT WE DO FOR STUDENTS

# Five ways we work with you

Not a template you download and hope for the best. Every engagement is scoped to your syllabus, your timeline, and the level you are actually at.

01

## 1-on-1 Mentorship Sessions

Direct sessions with someone who has built the thing you are trying to build. Bring a blocked project, an unclear requirement, or a blank page - you leave with a decision,not a reading list.

02

## Hands-on Capstone Projects

Final-year and mini projects across machine learning, NLP, Django and RAG. You get a working system, the source code behind it, and an understanding of why each piece is there.

03

## Live Coding Workshops

Sessions where the code gets written in front of you and the errors happen in front of you too. Watching something get debugged live teaches more than watching it work.

04

## AI Road Map

A sequenced plan from where you are to where you want to be - what to learn, in what order, and what to safely skip. Built around your branch, semester and placement timeline.

05

## Career Support & Review

Resume review, project presentation, and honest feedback on how your work reads to a recruiter. We tell you what is weak while there is still time to fix it.

WHAT WE DO FOR STUDENTS

# What you Can Build

Four domains, all with working source code and documentation. If your requirement sits outside these, it is still worth asking - most custom requests fall close to one of them.

01

## Machine Learning

02

## Natural Language Processing

03

## Django & Web Applications

04

## RAG Applications

EVERY PROJECT SHIPS WITH

## FREE TOOLS - NO ACCOUNT, NO COST

- **Resume Builder** — Placement-ready formatting
- **AI Chatbot** — Ask, draft, explain
- **Grammar Check** — Reports and emails
- **PDF Tools** — Merge, split, convert
- **Image to Text** — Extract from scans
- **QR Generator** — Links and documents

HOW IT WORKS

# From first message to viva

01

## Tell us the requirement

Send your project brief, syllabus guidelines or even a rough idea over WhatsApp or email. Screenshots of the college document are fine.

02

## Scope and timeline

We come back with what is realistically buildable in your window, what it will include, and what it will cost. If the deadline is too tight, we say so.

03

## Build with checkpoints

Work happens in stages with regular updates, so nothing arrives as a surprise at the end and changes are cheap while they are still small.

04

## Handover with documentation

Source code, documentation, setup guide and a walkthrough session - so you can run it, explain it, and defend the choices inside it.

05

## Viva and interview preparation

A practice round on the hardest questions your examiner or interviewer is likely to ask, starting with the weakest part of the project.

## Start with a message.

Tell us your branch, your deadline and what you have been asked to build.
We reply within 24 hours - usually a lot sooner.
